

**Fire restoration** occurs after the flames have been put out and the fire trucks are gone. Immediate treatment is necessary to reduce smoke and soot health hazards. Fire damage is ongoing and the longer you wait the more your restoration costs will rise. The longer neutralization, corrosion control and cleaning are delayed, the greater the scope and cost of the loss.

Due to the unique behavior of smoke, fire restoration may not be simple, that is why it is crucial to have a certified fire and smoke restoration professional. If not treated, smoke odor and discoloration can cause permanent damage. The smoke actually becomes acidic and eats through surfaces and materials.

The steps taken to restore fire damage include, properly evaluating the loss, testing the damaged materials, selecting optimum restoration alternatives, coordinating with insurance professionals and ultimately restoring your property to a pre-loss condition or better.

Chicagoland homes and businesses, victims of fire damage, can count on Helping Hand Fire and water restoration, 24/7 emergency service contractors for help. Ravenous by nature, fire for a homeowner can lead to depression and elevated levels of distress. Our job is to relieve some of that stress and return a damaged home or business to its original state. We provide reliable, responsive restoration services.

As a licensed, bonded and insured Chicago contractor, Helping Hand Fire and water restoration has maintained leadership in the restoration industry by providing state-of-the-art equipment and the latest advanced training for our highly skilled technicians.

We offer 24 hour emergency services from courteous, honest and understanding professional who help and support our clients through their time of need.
